

Abstract of the Disclosure

The present invention is directed to a multimedia electronic (mail) system and method for sending a voice message to an email recipient. The multimedia mail system includes a wireless communications network, at least one wireless communication device, an interactive voice response server for converting the voice message to a digitally stored audio file, and an email server for sending the audio file to the email recipient. The method of the present invention comprises the steps of communicatively connecting to a first server over the wireless communications network, selecting an option to send the audio file to the email recipient, communicatively connecting to a second server over the wireless communications network, recording the audio file on the second server, and sending the audio file to the email recipient.
